

# TRADE FINANCE CASE STUDY

The Vodacom Financial Services Business lending team has recently presented its strategy to the Vodacom board and obtained agreement and sign-off on a few key products/priorities. This includes but is not limited to:

- A Unified Merchant lending platform (see diagram on next page)
- Merchant trade finance products
- Orchestration between providers
- Product Support

The Product Manager/Business Owner does not have the capacity to build partnerships, value propositions and focus on delivery. She/He has asked for your help to unpack the requirements as it pertains to the platform and how the trade finance products will exist within the lending platform ecosystem.

Requirement:

1. Provide your methodology on how you'd go about designing the solution (End-2-End)
2. Identify and document all the stakeholders to make this solution a success
3. Provide a high-level impact assessment
4. Create and document a high-level BRS (including a high-level diagram) with all its various components
  - There might be gaps in the diagram on the next page - feel free to reuse, update or create a new diagram
  - Document assumptions made in your requirements and designs
  - Indicate all the required fields, components and data-points you deem necessary for the solution
5. Provide basic mock-ups of the solution to give stakeholders a view of your user experience vision
